

Technical facts:

Dimension:	Length:
 Round 10.63 inch (27cm)	L 15.75 inch (40cm) each module
 Square 10.63 inch (27cm)	Other dimensions possible on request!

The foundation:

Depending on the number of columns required, we recommend either an individual or strip foundation made of concrete. Alternatively foundations can be made of a metal bolt and an adjustable screw connection. Both types of foundation have been certified as safe by an engineer.

The materials:

These are just some examples of granite that can be used. The surface can be polished or sandblasted. Other materials or surfaces on request.

Blackdiamond Rubin Oceanblue Crystal

THE URN COLUMN

A modern burial system made of high quality materials and based on traditional principles - timeless and dignified.

The new burial system:

A timeless design placed within a traditional environment, the urn column for eternity. The urn column consists of individual modules which together form a memorial. The casket or ornamental urn is placed inside the urn column.

Through the timeless appearance, the numerous styles of design and the different varieties of surface, each urn column gets its individuality and its uniqueness.

The details:

The hollow interior of the urn column is used to accommodate and store the casket or ornamental urn. The casket is put into an urn-carrying net, which then is lowered into the hollow space.

The system enables a reverent and traditional burial. On the surface of the individual modules of the urn column an engraving or a fixing for a picture, an ornament, a flower vase or a candle holder can be provided and these can be individually designed.

The burial:

The system allows a traditional and reverent burial. The cap of the urn column is opened using its special tools. Then the casket or ornamental urn within the urn-carrying net is slowly lowered inside. With the two metal loops of the urn-carrying net attached to a metal ring on top of each individual module, the bag is fixed in the right position. The cap is put back on again and screwed down with its secure screws and its tool. This way vandalism is prevented.

The advantages:

- + memorial and casket in one
- + minimal space requirement
- + timeless design
- + numerous styles of design
- + weatherproof
- + low maintenance
- + extendable
- + low initial costs
- + easy to integrate with existing graves
- + for biodegradable urns

Each individual module is screwed to each other. This allows the extension or upgrade of the urn column as desired. Based on our experience we recommend a maximum of four modules per urn column.

The urn column design by GRABKULT is protected by patent EU 2194215.
